

Postaller

Facts:

Town: **Joching**
 subsite of: **Jochinger Berg**
 Size in ha: **25,25**
 Altitude in m: **312 - 423**
 Aspect: **S - SE**
 Average Slope in %: **23**

Max. Slope in %: **Up to 46 %**
 Insolation in hours per year: **2279**
 Terraced vineyard: **Yes**
 Labour required in h: **11.400**
 First documentary evidence: **1410**

Description

Postaller designates the part of "Jochinger Berg" with the highest sea level.

Weingut Holzappel

Soil Profile Postaller

In the lower areas, the Postaller is formed from friable paragneiss landslide material, and in the vineyards at higher elevations, it transitions into hard and little-weathered paragneisses. In the middle elevations, some loess is also found.

The profile comes from the highest vineyard area of the Postaller. Here, the versatile paragneiss manifests itself with inclusions of dark-coloured, compact amphibolite.

The vines are challenged by the shallow soil. The wines tend to be more delicate with a moderate alcohol content.
